

ATSIP, the Association of Transportation Safety Information Professionals, is the leading advocate in the United States for improving the quality and use of traffic records data including crash, driver, vehicle, roadway, citation, court and adjudication, and injury surveillance records. Our activities are supported by federal and state governments, academic and professional associations, and private sector partners.

ATSIP's membership consists of professionals from local, state and federal government agencies including Highway Safety Offices; Departments of Transportation, Public Safety, and Health; law enforcement agencies; private sector professionals; and partners from academia and university research centers.

ATSIP fulfills the modern transportation safety professional's need for collaboration and information exchange that is not met in any other way. As long as people continue to die in motor vehicle crashes on our streets and highways, the collaborative societal effort called transportation safety will continue. Within that effort; accurate, complete, timely, uniform, accessible, and integrated transportation safety data continues to be the essential foundation of any progress in preventing crashes and saving lives.

The Annual Traffic Records Forum

ATSIP promotes sound policies, models, practices, and technology that produce widely available high-quality traffic records data and information used for effective safety policy-making and program implementation at the **Annual Traffic Records Forum**. The Forum is a platform for traffic safety data stakeholders to share traffic records improvement strategies and to foster a community expertise that enables the development of strategies, standards, policies, and programs.

ATSIP acts as the national authority on the development of traffic records systems and illustrates how to be an effective partner to transportation safety professionals including government agencies. Forum initiatives include:

- Providing a platform for all traffic records disciplines including organizations and government entities, to identify the latest advancements in technology including vendor products and software.
- Promoting strategies that establish model practices and influence national policy for improvements in the quality and use of traffic safety information systems.
- Promoting professional development, encouraging research, developing public awareness, and exchanging professional information in the pursuit of the mission of ATSIP.
- Identifying emerging highway traffic safety issues and providing links to the latest research.
- Providing opportunities for organizational growth through member retention, volunteerism, better communications, and enhanced web services to communicate ATSIP's mission.
- Strengthening ATSIP's ties with federal and state partners and liaisons to identify public safety issues of national concern and how ATSIP may be able to assist in their needs.

The ATSIP Traffic Records Forum attracts participants from all over the world including international vendors and key representatives from state's Traffic Records Coordinating Committees. For more information, please visit our website at <https://trafficrecordsforum.org/> or contact Tara Casanova Powell, Executive Director, ATSIP, email: TaraED@ATSIP.org, phone: 203-809-8709.

Your sponsorship will allow the Traffic Records Forum to continue to provide information to transportation safety information professionals worldwide.
